SOCASP | Fuel Importation & Distribution

PROJECT BRIEF

Dashboard overview and analytical reporting concept

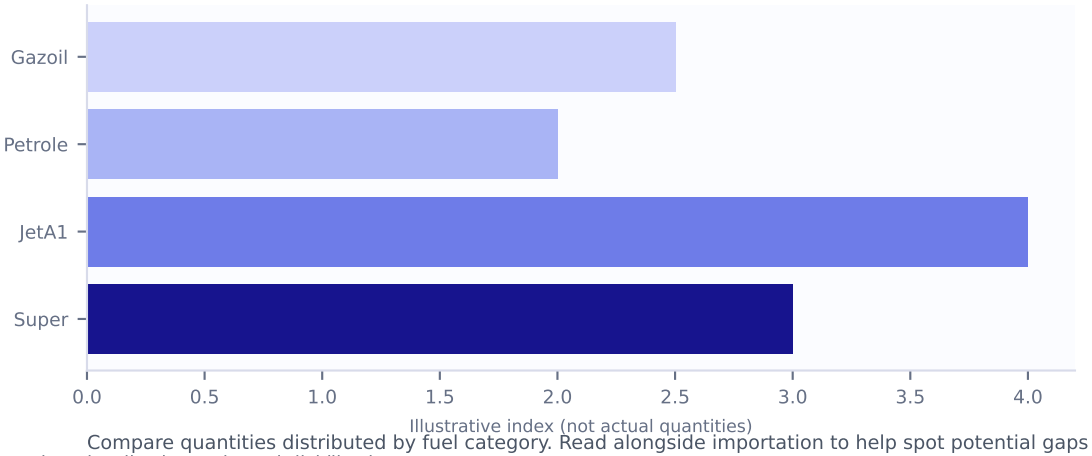

Purpose: consolidate fuel importation and distribution records, compare fuel categories and marketers, and support Excel reporting.

1. Importation par carburant

Compare Super, Jet A-1, pétrole and gasoil in imported quantities. Use this view to identify the fuel categories contributing most to total imports.

2. Distribution par carburant

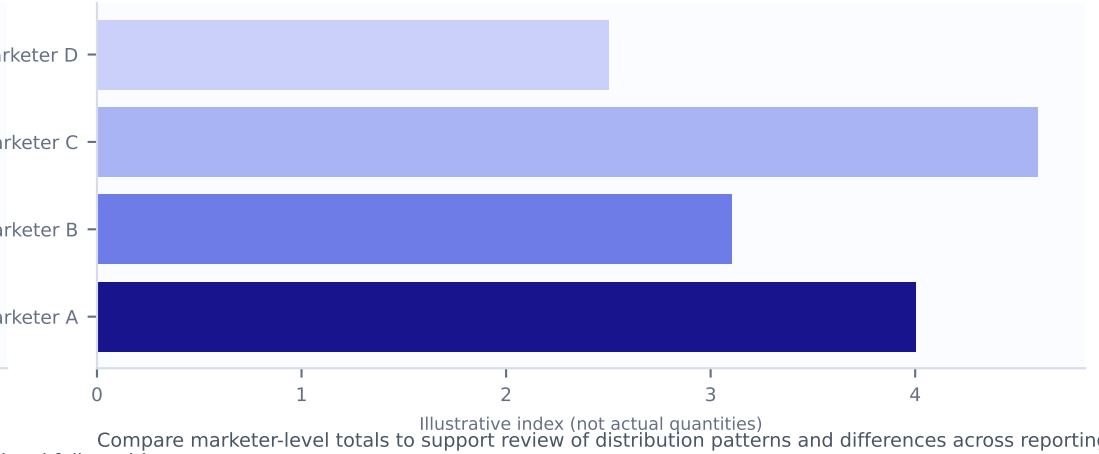

Compare quantities distributed by fuel category. Read alongside importation to help spot potential gaps between supply and distribution.

3. Évolution mensuelle

Track quantities over months and years to highlight seasonality, peaks and changes that merit operational follow-up.

4. Comparaison par marketeur

Compare marketer-level totals to support review of distribution patterns and differences across reporting entities.

Data note: the supplied Python file refers to Excel workbooks and a MySQL connection, but those source workbooks/database were not included. Charts above are illustrative placeholders, not operational results.

Prepared from the supplied SOCASP Python code and README
